GIRIDHAR REDDY GODDILLA

Luton, UK | +44 7765508654 | giridharreddygoddilla@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Data Analyst with an MSc in Data Science (Distinction) and 2+ years of experience across software engineering, SQL-based data handling and analytics. Analysed 197K+ sales transactions in Power BI, Tableau and Excel to uncover revenue patterns by day and city, and built Pandas workflows cleaning 180K+ order lines for forecasting and reporting. Skilled in SQL, Python, Power BI and Excel.

PROFESSIONAL EXPERIENCE

Data Analyst Intern | Victoria Solutions, London, UK **Oct 2025 – Nov 2025**

- Identified Saturday as the highest-sales day (INR 7.78M, 14.7% of sales) and five cities contributing 33% of revenue by analysing 197,430 food-delivery transactions (INR 53.01M sales, INR 268.51 average order value).
- Segmented orders by day of week and city using Excel PivotTables, and defined KPIs including total sales, order volume and average order value.
- Cleaned and validated the dataset using Excel formulas and filters, resolving inconsistencies to improve reliability before analysis.
- Built Power BI and Tableau dashboards presenting sales, order volume and average order value by day and city.

Software Engineer | FOURP Technology Solutions Pvt. Ltd., Chennai, India **Jun 2022 – Aug 2024**

- Engineered end-to-end ETL pipelines using SQL and PySpark, integrating multi-source e-commerce data through distributed processing, complex joins, data cleansing and validation to deliver analysis-ready datasets across assigned product categories and regional markets.
- Designed data warehouse architectures using relational and dimensional modelling, implementing fact and dimension tables, data aggregation and transformation workflows to establish centralised datasets for historical sales analysis and business reporting.
- Developed interactive Power BI and Tableau dashboards incorporating advanced DAX measures, KPI frameworks, time-intelligence calculations and product-region segmentation to analyse revenue trends, sales performance and operational metrics.
- Applied YoY analysis, revenue trend analysis and performance benchmarking to identify product-level and regional growth opportunities, contributing to a 14% sales increase across assigned product categories and geographical markets compared with the previous year.

PROJECTS

Fake Job Posting Detection | Python, scikit-learn, NLP, XGBoost, LightGBM GitHub

- Analysed 17,880 job postings, identifying a 4.84% fraudulent class imbalance; examined textual characteristics, recruitment patterns and missing information to understand fraud indicators and establish a foundation for classification.
- Engineered 20 features capturing textual richness, scam-related keywords, missing information and writing patterns; integrated TF-IDF representations to transform unstructured job descriptions into structured inputs for machine learning classification.
- Benchmarked LightGBM, XGBoost, SVM and Gradient Boosting using precision, recall, F1-score and PR-AUC; LightGBM achieved the strongest fraud-class results, recording a 0.706 F1-score and 0.793 PR-AUC.

Uber Trip Analysis | Power BI, DAX, Data Modelling GitHub

- Analysed 103,728 Uber bookings representing $1.55M in booking value; evaluated booking distributions, vehicle-category performance, temporal demand and geographical patterns to identify revenue trends and understand operational performance.
- Developed an interactive Power BI dashboard incorporating data modelling, advanced DAX measures, dynamic KPI selection and interactive slicers, enabling multidimensional analysis of booking patterns across time, vehicle categories, payment methods and locations.
- Identified UberX as the leading vehicle category, accounting for 38,744 bookings (37.4% of total) and $583,880 in booking value; examined hourly demand, weekly patterns and high-frequency locations to derive operational insights.

Bank Loan & Credit Risk Analysis | Excel, Pivot Tables, Data Visualization

- Analysed 38,576 loan records across 25 attributes, assessing portfolio composition, lending performance and repayment activity across $435.8M in funded loans and $473.1M in borrower repayments.
- Built interactive Excel dashboards using PivotTables, calculated fields and dynamic filters to monitor five KPIs; analysed Good and Bad loan segments, identifying 5,333 charged-off applications (13.82%) associated with $65.5M funded and $37.3M repaid.
- Identified debt consolidation as the leading borrowing purpose, accounting for 18,214 applications; analysed borrower trends and repayment collections, uncovering a 15.8% increase in December month-to-date collections against the comparable preceding period.

TECHNICAL SKILLS

Programming & Data Processing: Python, Pandas, NumPy, SQL, PySpark

BI & Visualisation: Power BI, DAX, Tableau, Advanced Excel, Matplotlib, Seaborn

Data Engineering & Analytics: ETL/ELT, Data Cleaning, Data Transformation, Data Validation, Data Warehousing, Data Modelling, EDA, KPI Reporting

Machine Learning & Forecasting: Scikit-learn, XGBoost, LightGBM, ARIMA, SARIMAX, Time-Series Analysis, Streamlit

Tools: Git, GitHub, Jupyter Notebook

EDUCATION

MSc in Data Science | University of Hertfordshire, Hatfield, UK **Sep 2024 – Sep 2026**

Classification: Distinction

Coursework: Data Analytics, Statistical Modelling, Database Management, Data Mining, Machine Learning, Neural Networks, PySpark

Bachelor of Technology in Computer Science and Engineering | Lovely Professional University, India **Aug 2019 – Aug 2023**

Classification: Distinction

Coursework: Probability and Statistics, Data Structures and Algorithms, Database Management Systems, SQL, Python, Data Science

CERTIFICATIONS & AWARDS

- Machine Learning, Data Science & Python Programming – DataCamp
- Supervised Machine Learning: Regression and Classification – DeepLearning.AI
- Certificate of Excellence (Internship) – Victoria Solutions
- Best Internship Project Award – 360DigiTMG
